Q: Take a screenshot in PHP on mobile phone without a web server I want to create an interactive image gallery (web based) for mobile phones and the only way to create a GUI is by taking a screenshot and then processing that image. I'm looking for the best way to take the screenshot on mobile phone. I could make a background thread that takes the screenshot as long as it could be done. The problem is that I can't use any web server or database as this will limit the platform to the mobile phones only. I need a direct communication between the mobile phone and the server (in the same LAN). Any ideas? A: You could also do it using some emulator like Android SDK, there is a lot of libraries that you can use.

Home, Music and Life
Living in the 80's was very fun, kids could play in huge spaces. Due to the popularity of the 80's (as the 80's were also a time when Wall Street as well as the economy was booming) we don't have these huge spaces anymore. However, if we listen to songs of the 80's, we can get back in the 80's. This is the starting point of the music genre 80's. We have a mix of the good old days and the new times, which helps us get through life in the present day. In a way, you could say that the 80's is a soundtrack to the present day life. I'm going to take you back to the 80's by recreating the 80's music that I'm listening to right now. When I listen to the 80's I can get back in the 1980's. I feel like a kid again when I listen to the 80's music. I want to go back in time to re-live those years. I started with the 80's music videos. Then I moved on to songs. I have a few problems with the 80's music videos. The videos that have been shot in the 80's had really distorted music. I couldn't make out any lyrics and the music was distorted. The songs that I'm playing in this playlist are from the 80's. Therefore, if you listen to them
