Ltd., Japan's leading snack food company, said Tuesday it will take steps to reduce its 16-fold share of the market for cooked potato chips and related snacks in the Asian market. The proposal would limit how much Morinaga can grow its share of the market for snack foods in the Asia-Pacific region. The company will consider cutting the size of its chips by 1/3 over the next five years and phase out underselling in some markets. Under the proposals to be considered at a board meeting next week, the company will limit its chips to chips with a nominal weight of 16 grams or less. New rules on underselling are expected to be put into effect next year in Japan, China, Taiwan and other Asian markets. Until now, underselling has been banned in Asia and the company had demanded similar rules in Europe. Morinaga had raised the

What is a Good price to invest in your first digital pinball machine?.Dimethylglutarate stimulation of mitochondrial respiration and glycolysis in human fibroblasts. Dimethylglutarate (DMGL) is an endogenous compound with various and complex metabolic pathways. In this study, we examined whether DMGL may directly influence mitochondrial respiration and glycolysis in human fibroblasts. The resting state of oxygen consumption and of lactate generation in fibroblasts was not affected by DMGL, but the effect of DMGL on stimulated oxygen consumption was dose-dependent and reached statistical significance at DMGL concentrations of 5 mM. Glycolytic capacity of fibroblasts was stimulated by DMGL in a dose-dependent manner with a significant effect at concentrations of 3 and 5 mM. In addition, the DMGL effect was reversible and washed out when the cells were washed twice with phosphate-buffered saline. The effect of DMGL was completely abolished by removing the medium from the incubator, and was completely reversible by adding glucose back. These findings are in agreement with the notion that DMGL may serve as a metabolic intermediate to conserve glucose for cell proliferation. Media
